

CSP AT CSIRO

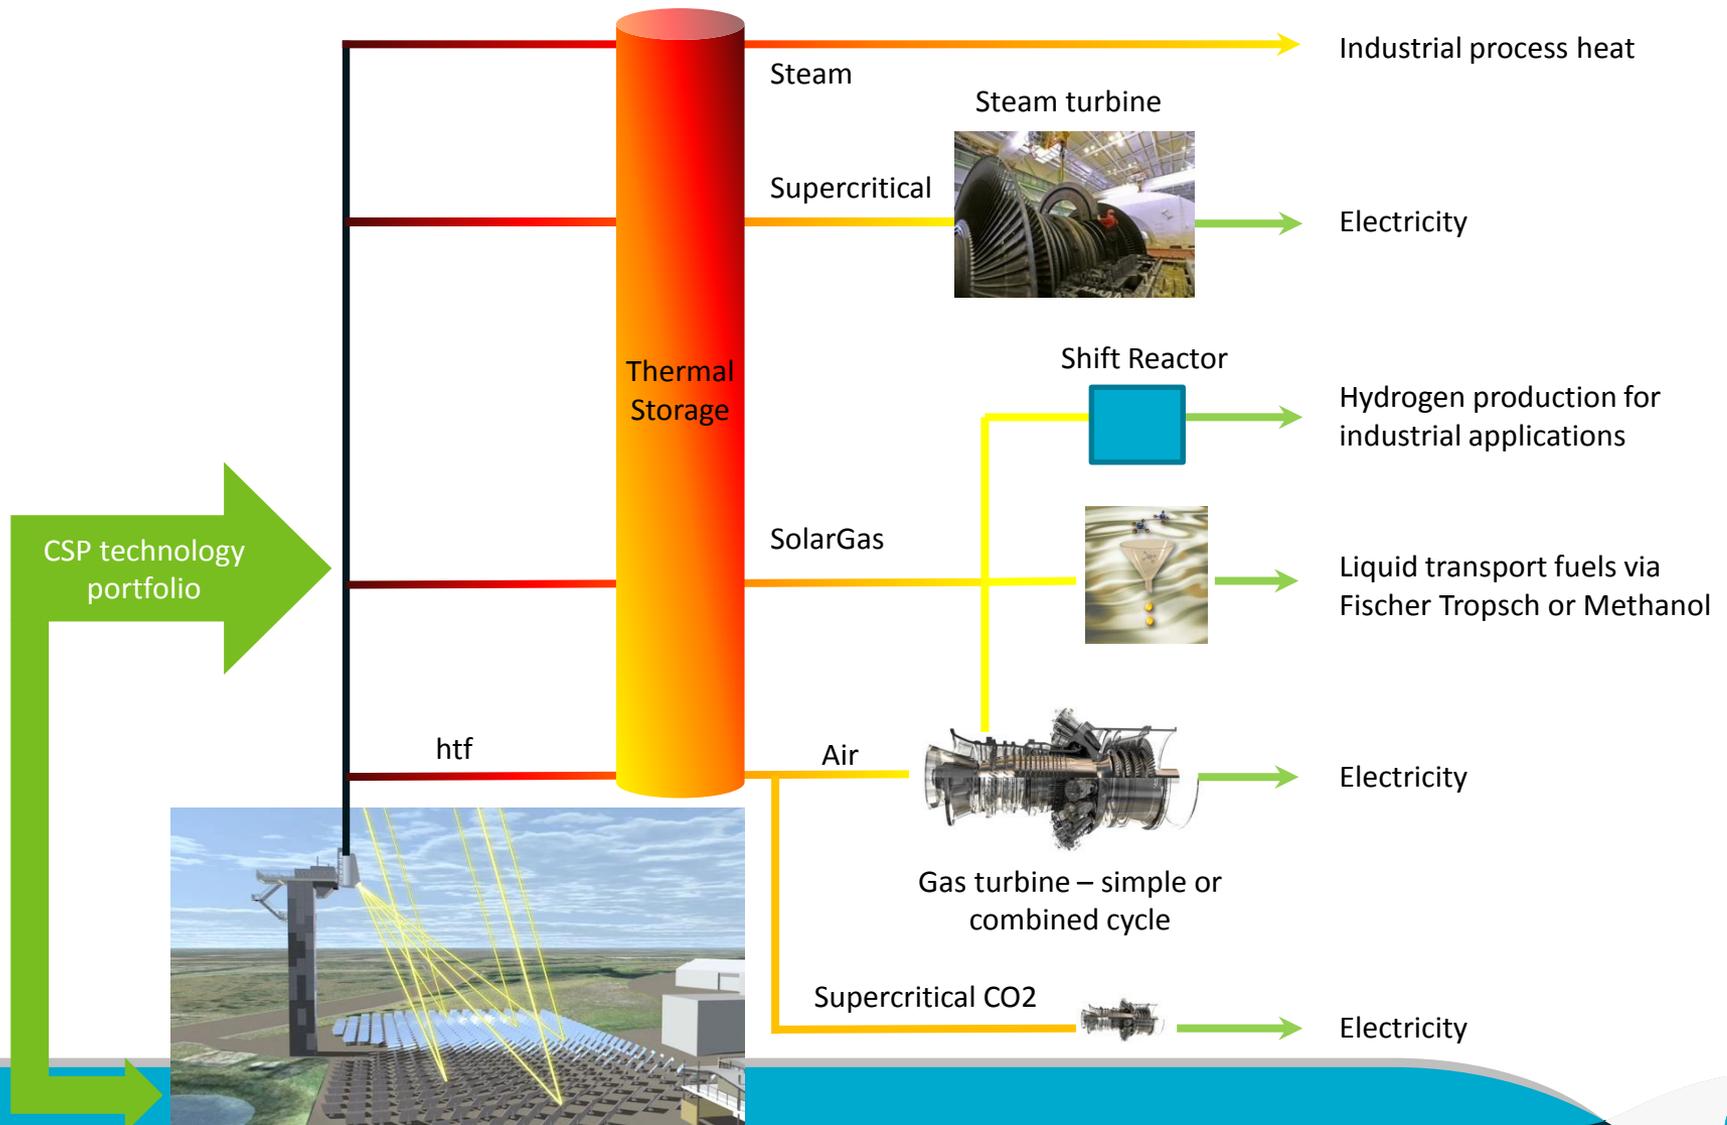

STATUS AND FUTURE

Wes Stein
Group Leader, Solar Technology

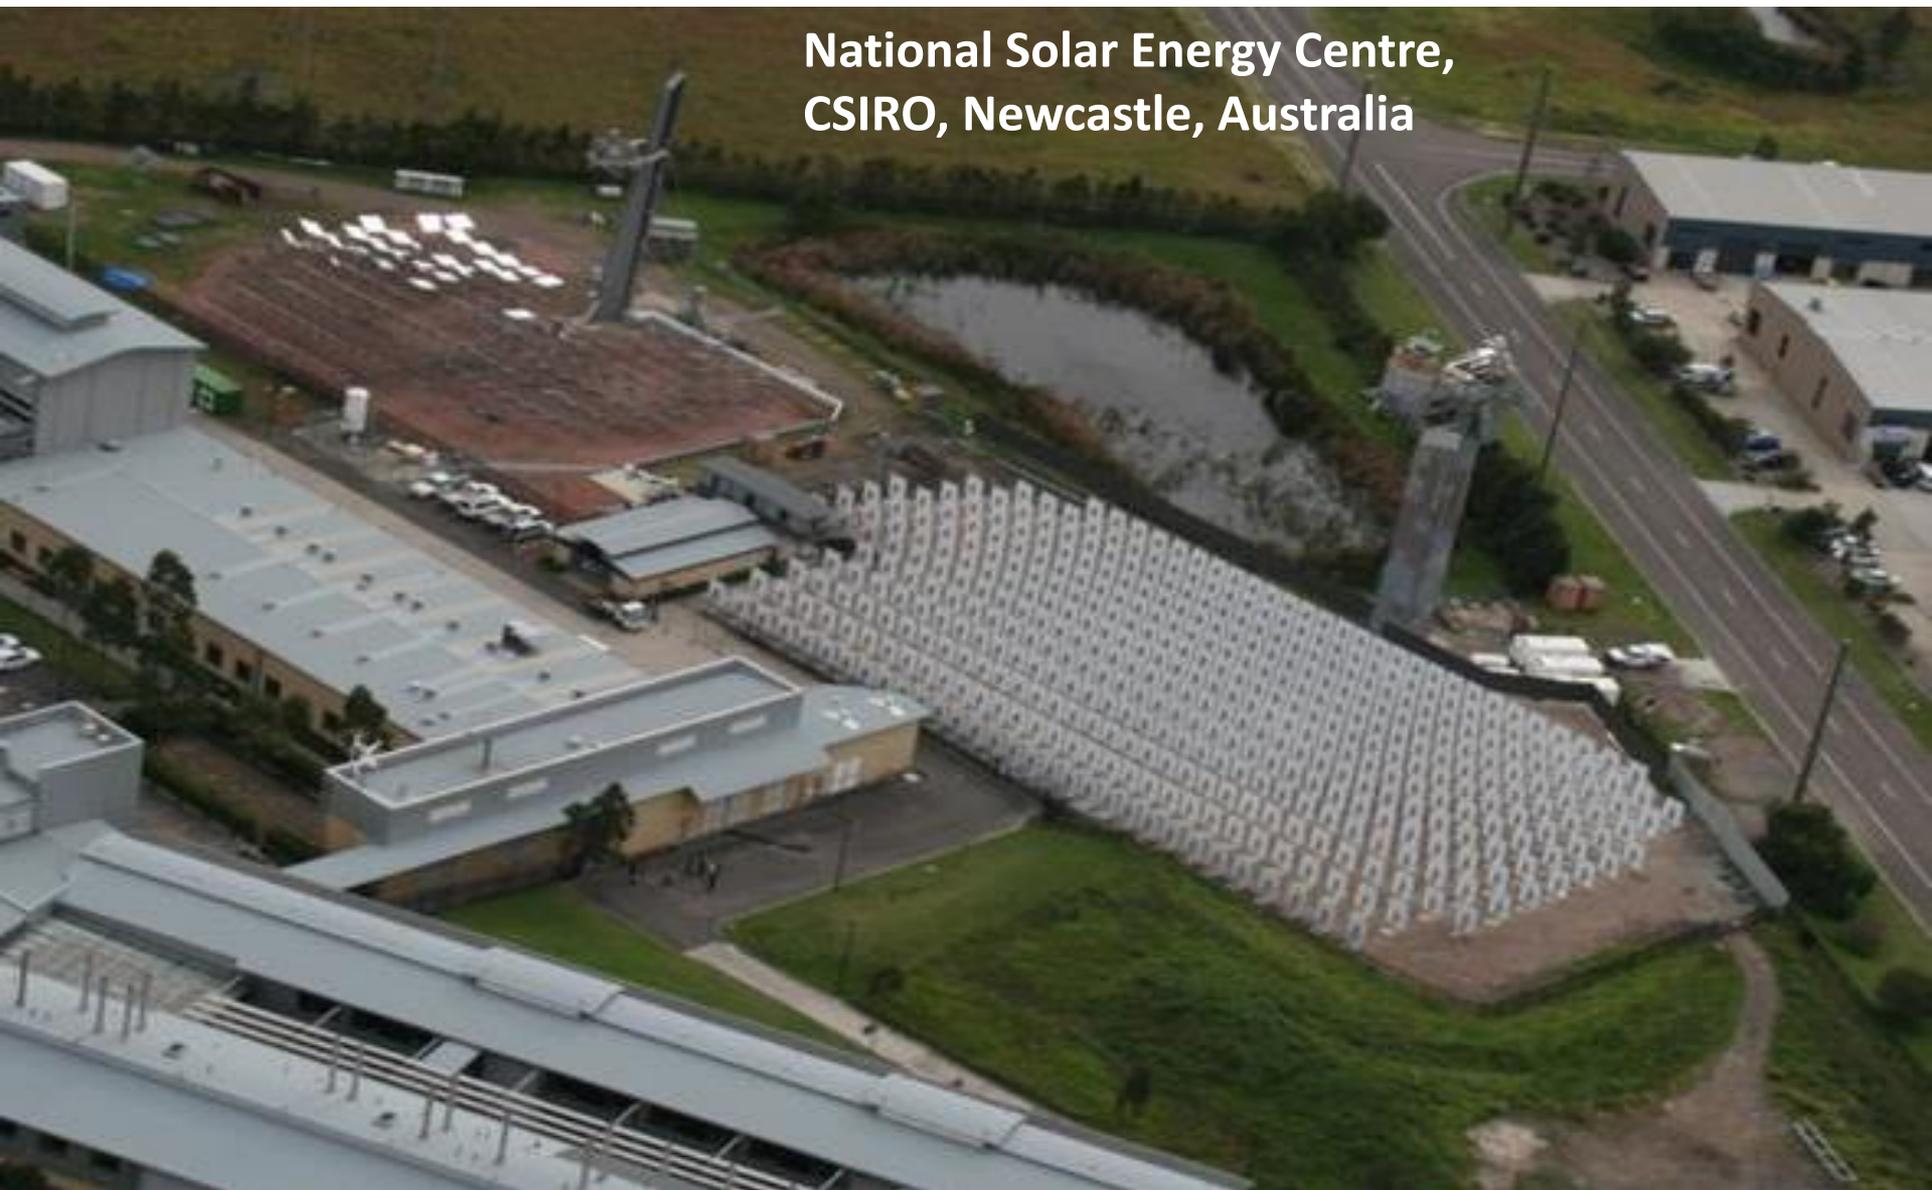

GENERAL MATERIAL, 2015
www.csiro.au

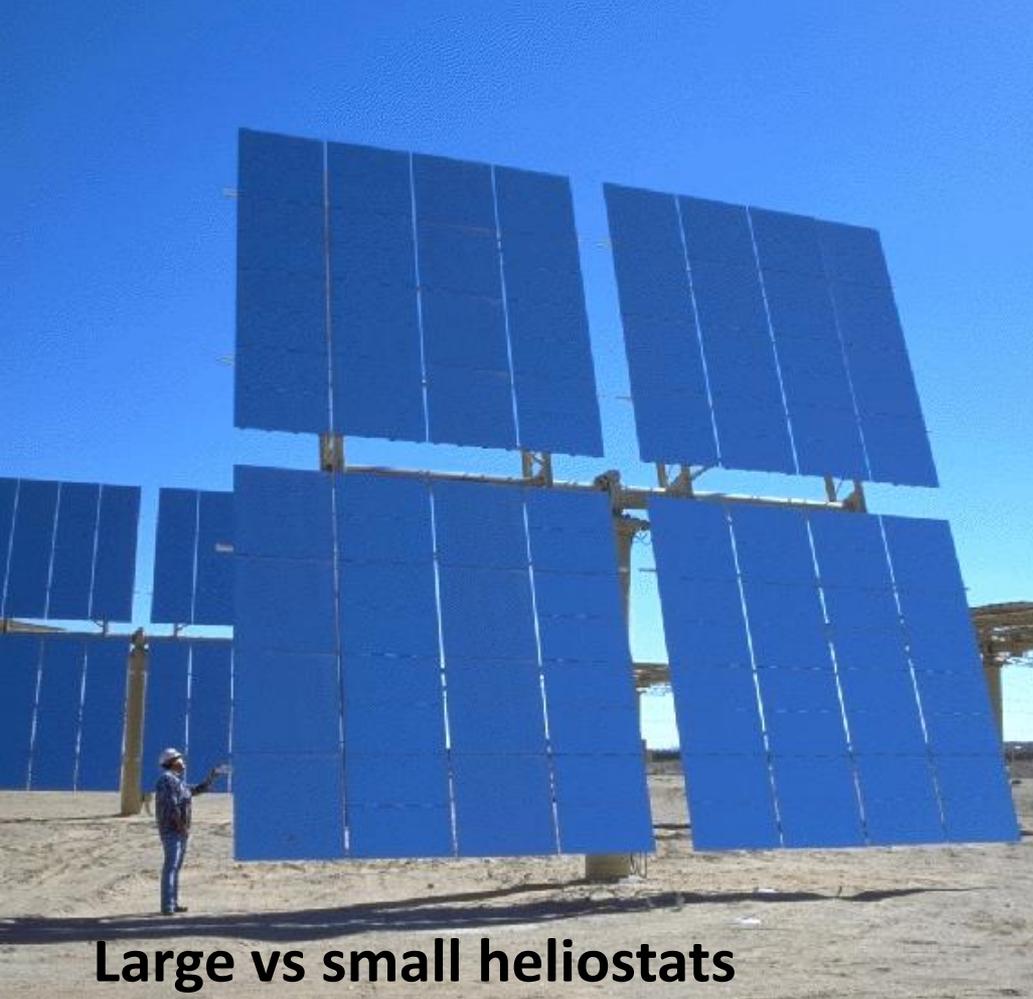

Targeted portfolio of CSP Research Activities

National Solar Energy Centre, CSIRO, Newcastle, Australia

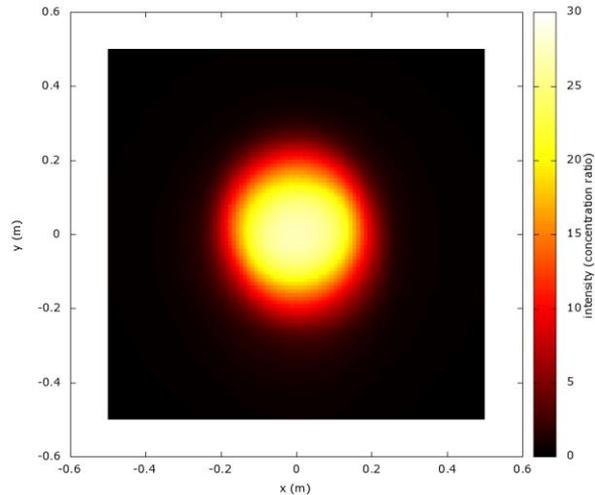

Large vs small heliostats

- Economies of scale vs mass production
- Simplicity of in-field calibration
- Manufacturing and handling
- High concentration optics

Heliostat and Receiver Performance

A CSIRO heliostat:

- About 50kg of steel
- 5m² of high reflectivity glass mirror
- Actuators
- Fancy electronics

Cost of “dumb” materials – about \$50/m²

Flux images - mirror size and time of day

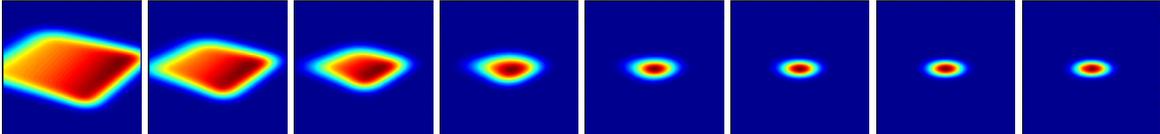

4x4 m target plane

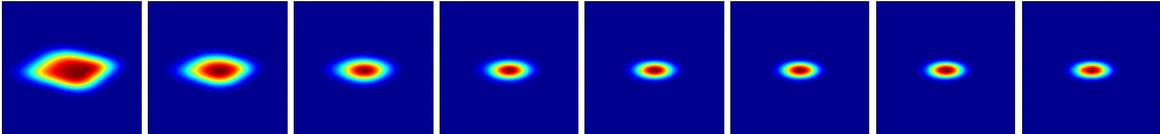

9:00

16:00

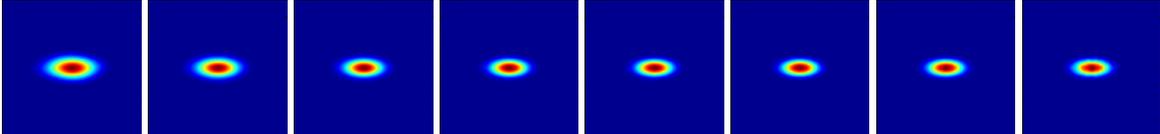

4 x 4m

2 x 2m

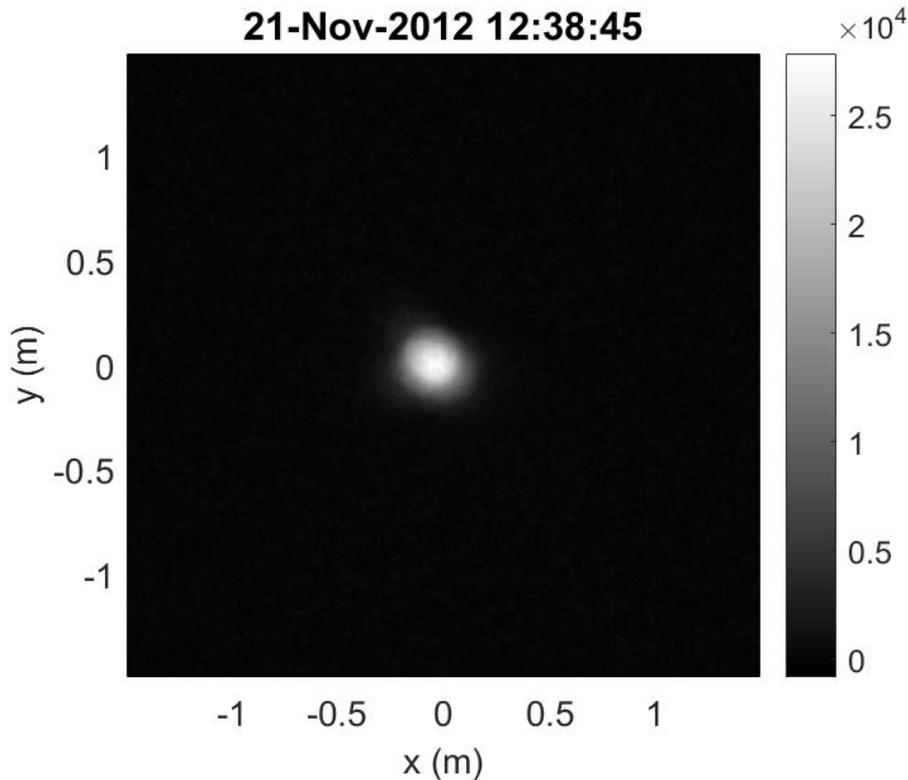

1 x 1m

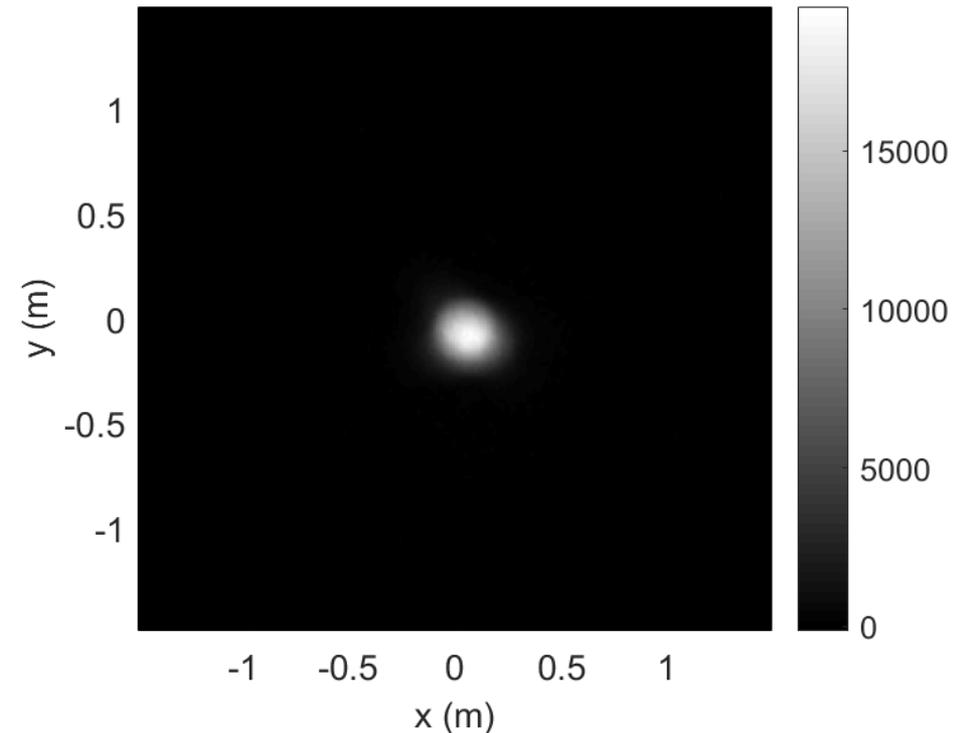

Comparison first and last calibration images at similar elevation (ID235)

21-Nov-2012 12:38:45

Solar elevation angle = 77.1°

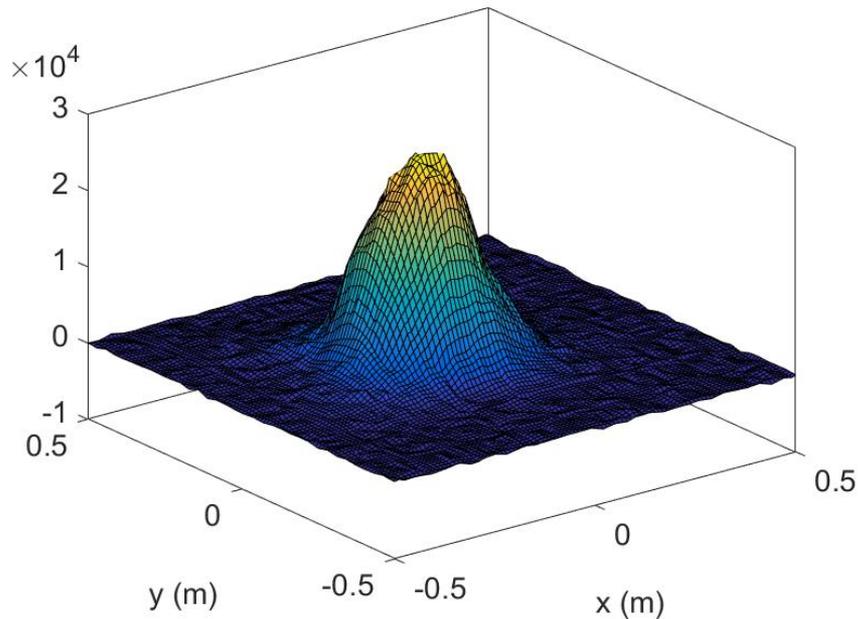

11-Feb-2015 13:26:44

Solar elevation angle = 70.8°

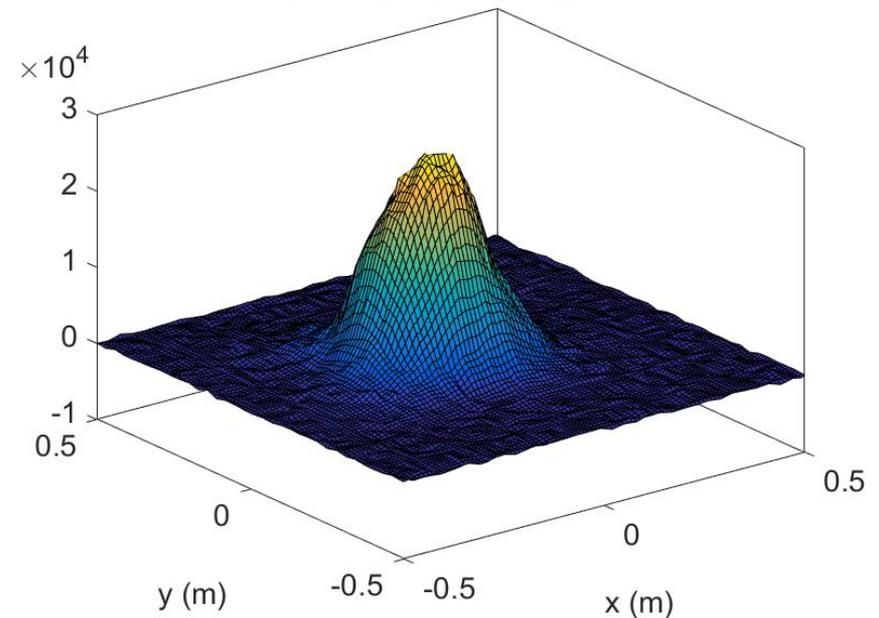

Comparison first and last calibration images at similar elevation (ID235) – 3D image

21-Nov-2012 12:38:45

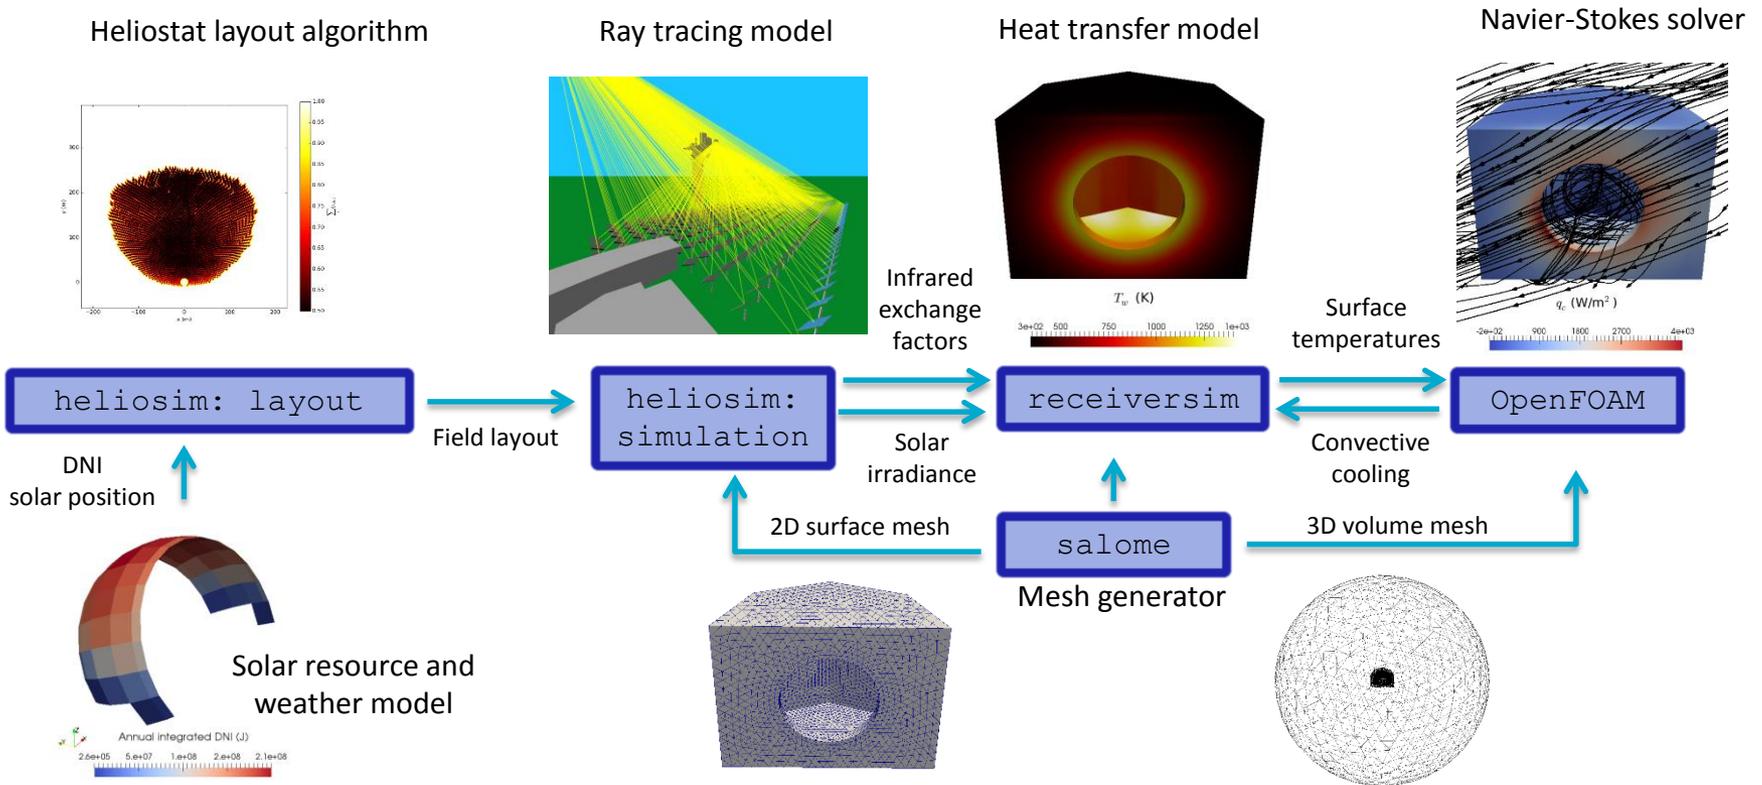

Solar zenith angle = 77.1°

11-Feb-2015 13:26:44

Solar zenith angle = 70.8°

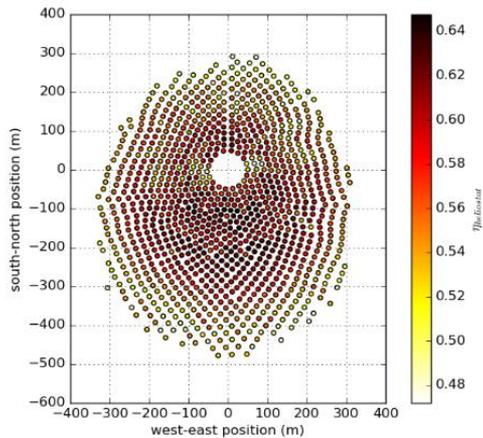

Integrated model for field and receiver design

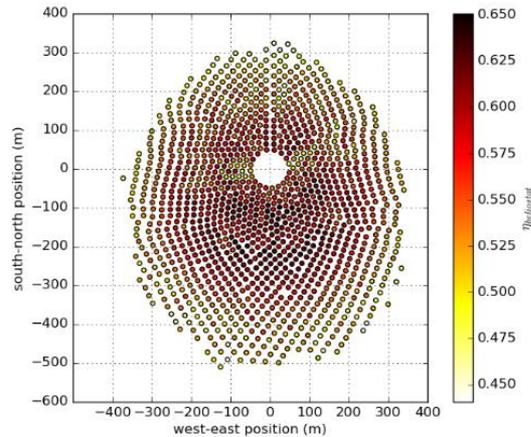

Potter, Kim, Stein - CSIRO

Field layout tool

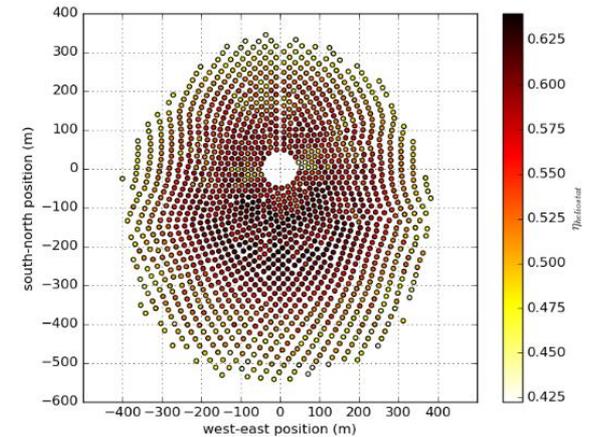

Example: Optimised Design of an 85 MW_t Molten Salt Central Receiver System

(a) $A_{\text{mirrors}} = 125000 \text{ m}^2$, $E_{\text{RMY}} = 217.5 \text{ GWh}_t$

(b) $A_{\text{mirrors}} = 150000 \text{ m}^2$, $E_{\text{RMY}} = 241.8 \text{ GWh}_t$

(c) $A_{\text{mirrors}} = 175000 \text{ m}^2$, $E_{\text{RMY}} = 260.4 \text{ GWh}_t$

Heliostat field layouts for various total mirror areas visualised by heliostat efficiency

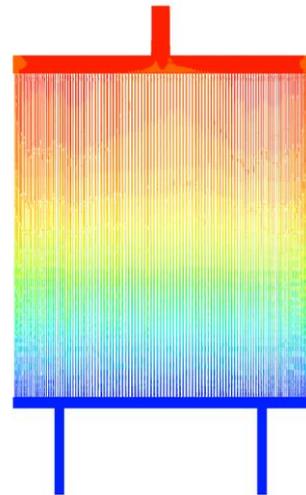

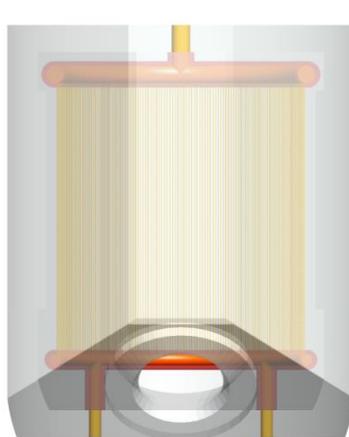

Potter, Kim, Stein - CSIRO

CSIRO Receiver Capability

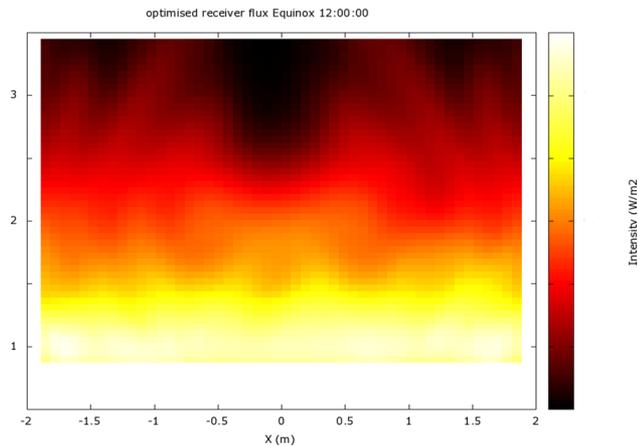

Example: Design, build test and analyse a 600kWt Tubular air receiver
5 bar, 850°C air keeping hottest surface T lower than 920°C

Receiver

Air Temperature

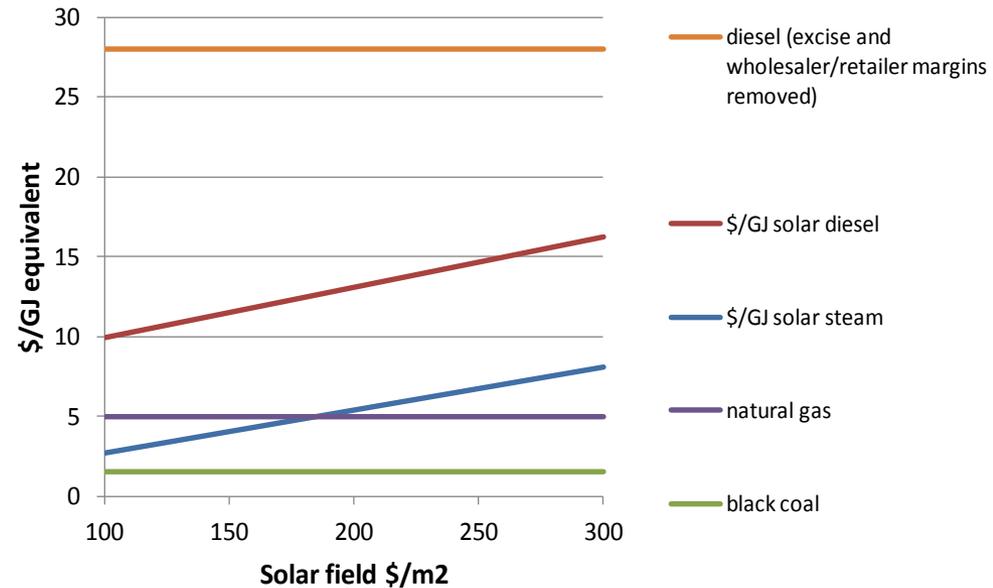

Solar flux
supplied

The key to cost-effective energy from CSP

High efficiency solar electricity

Solar fuels

CSIRO s-CO₂ activities

IN-FIELD PILOT

- Completed fabrication of s-CO₂ test loop and solar receiver, receiver rated for up to 720°C and 30MPa output though most testing will be at ≈23MPa.
- System operated at supercritical conditions (on gas heater) for commissioning
- Plumbing allowance made for a future small turbine.

MATERIALS EXPERIMENTS

- High temperature materials “lifing” experiments and creep calculations for s-CO₂ >700°C, >25MPa

SYSTEM & PROCESS MODELLING

- The material, component and system knowledge gained will be used for development of a solar s-CO₂ demonstration project.

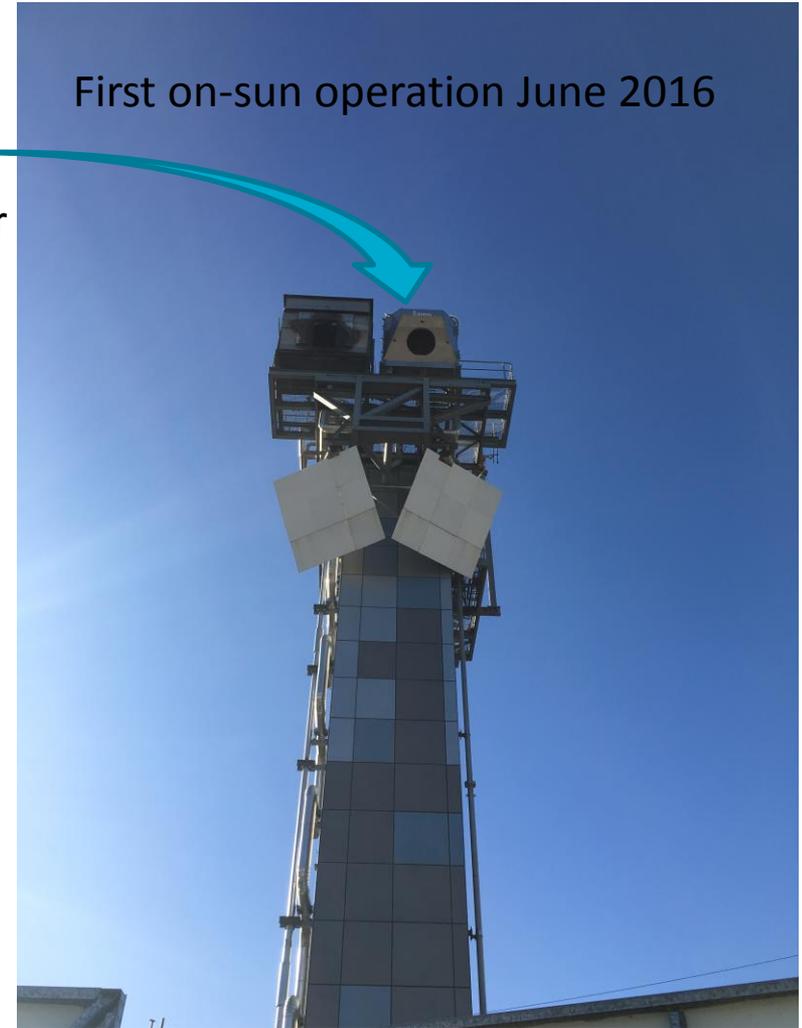

30MPa

s-CO₂ Solar thermal Receiver

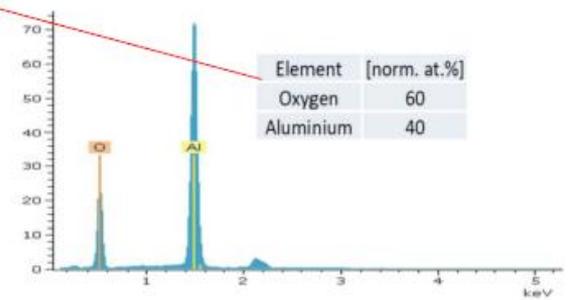

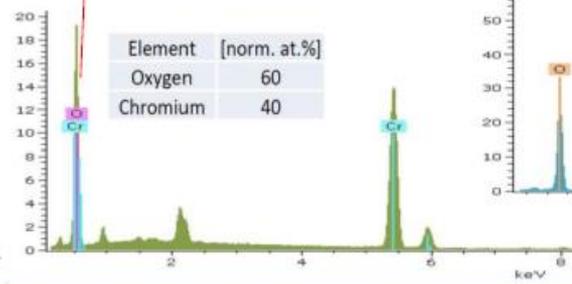

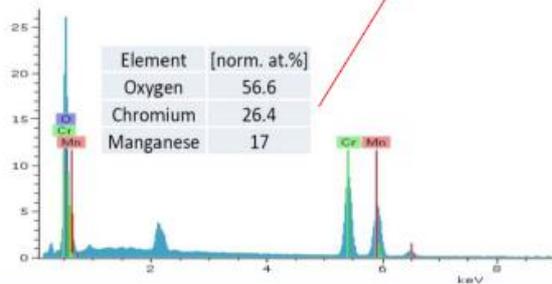

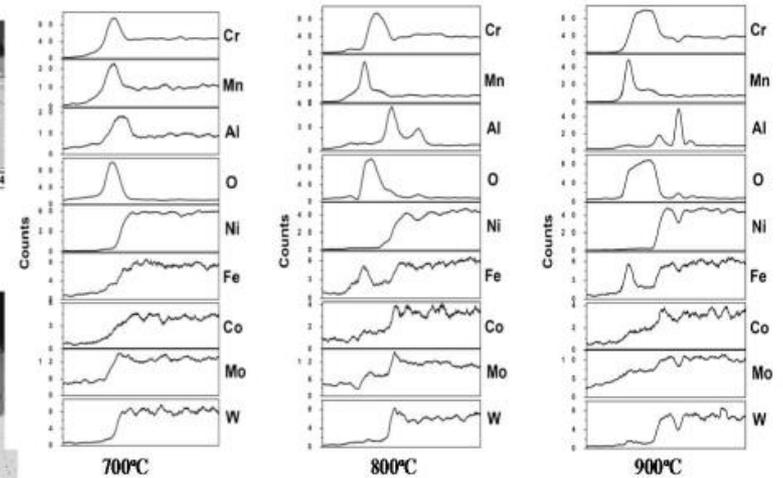

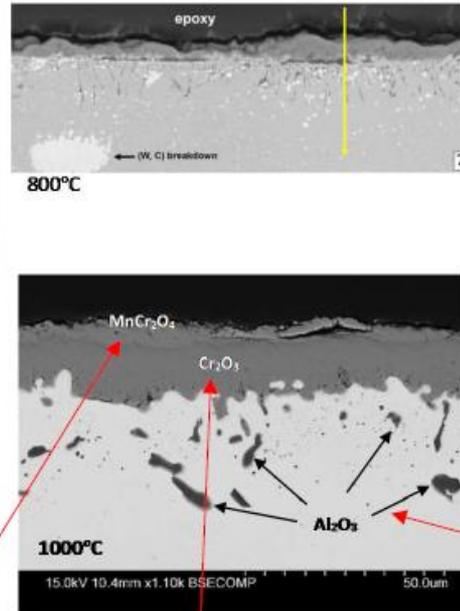

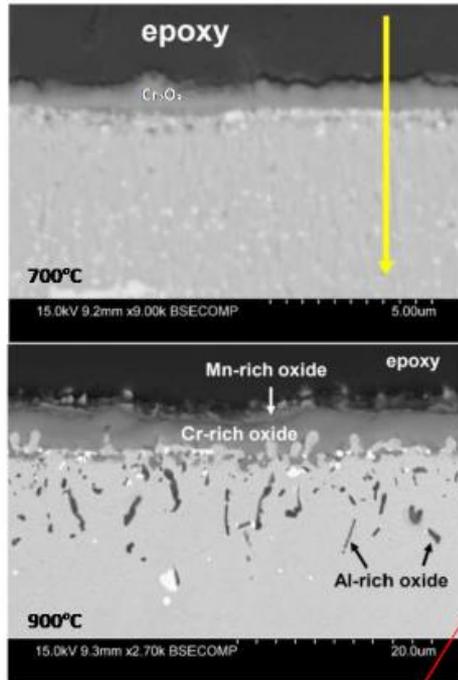

s-CO₂ solar receiver

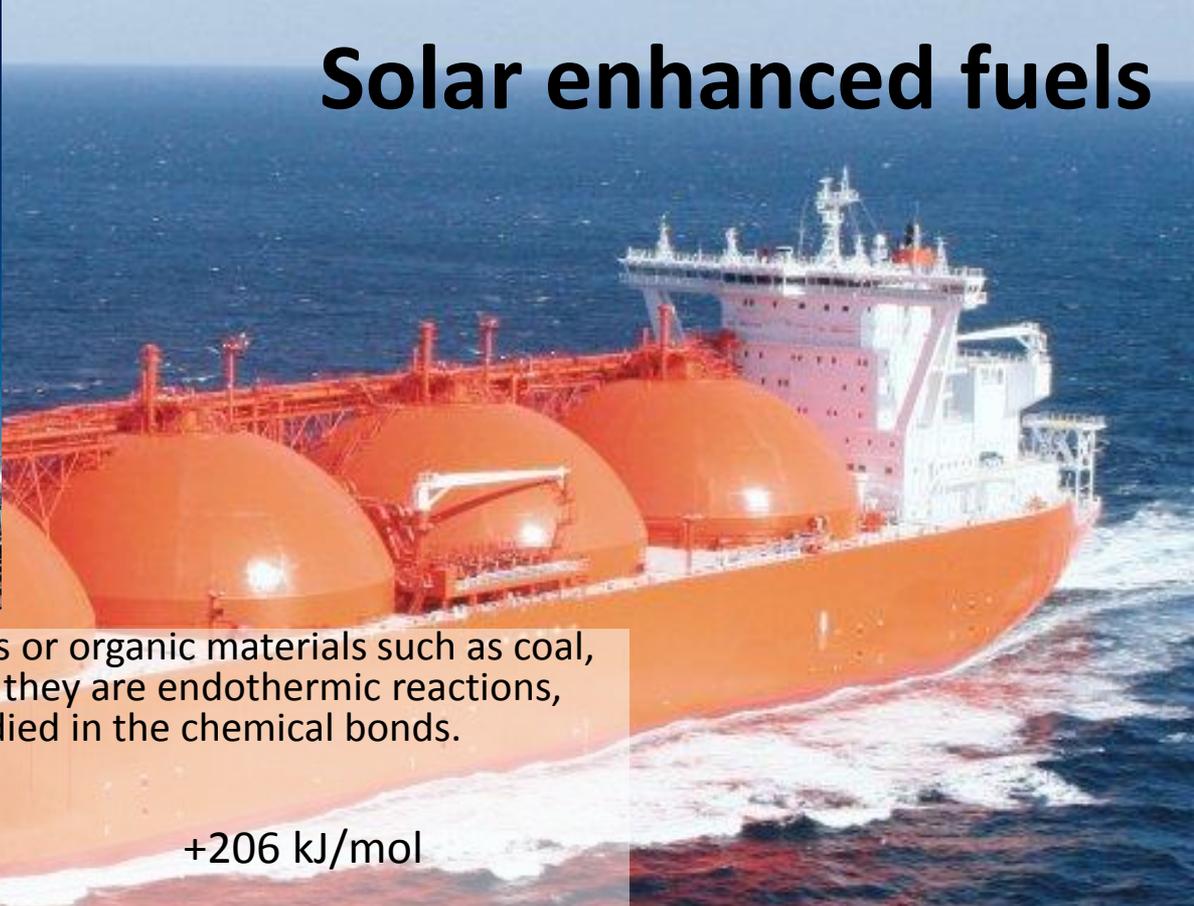

First on-sun operation June 2016

Corrosion results Haynes 230

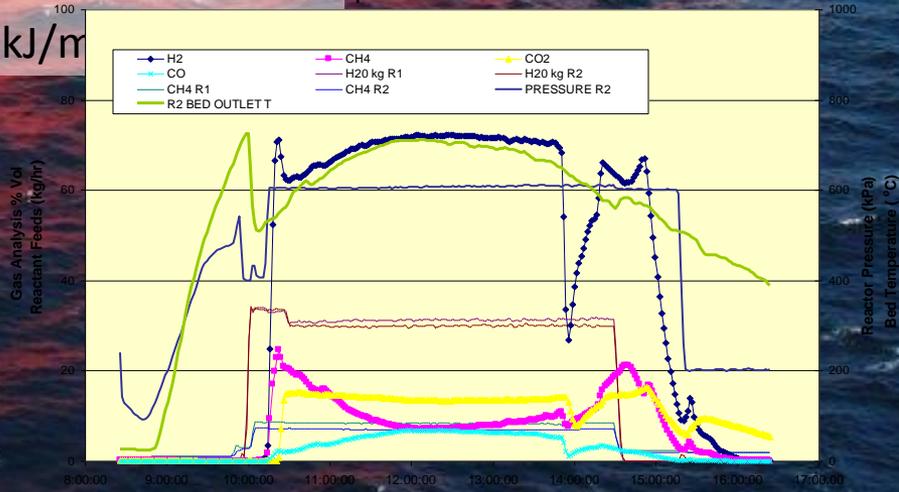

Solar enhanced fuels

Thermal decomposition of carbonaceous or organic materials such as coal, natural gas or biomass to fuels. Because they are endothermic reactions, the fuel product has solar energy embodied in the chemical bonds.

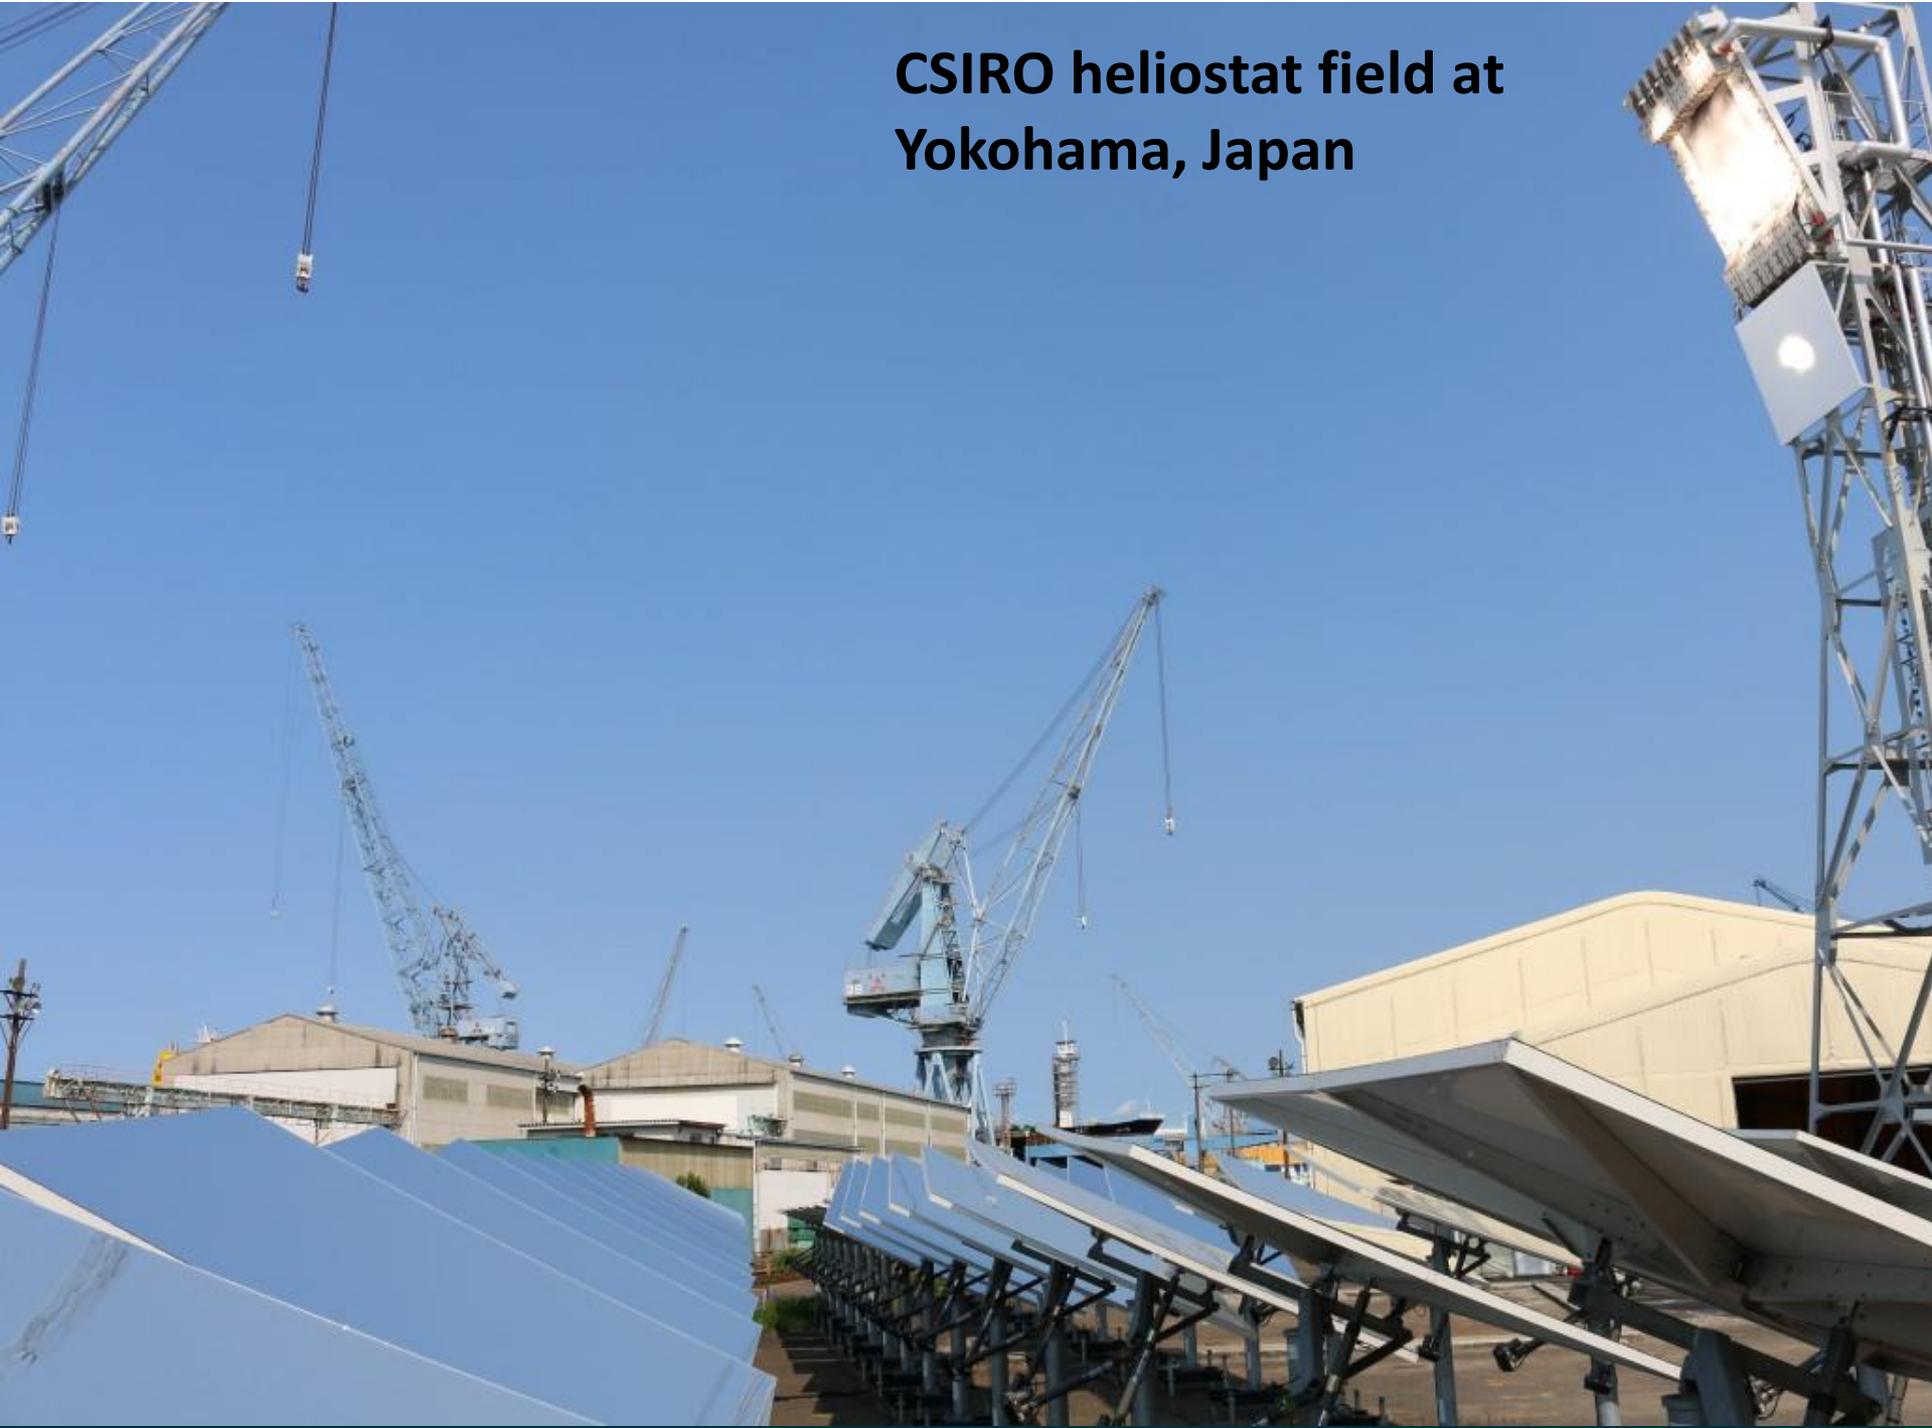

Full Operation - 01-10-09

CSIRO heliostat field at Cyprus Research Institute

CSIRO heliostat field at Yokohama, Japan

Thank you
